Forecast for Friday 14 May 2021

Weather: Damp during the eartly hours and at first, with extensive low cloud and mist for all but perhaps some of the most sheltered west-facing valleys. This cloud and mist should very gradually lift into the afternoon, eprhaps revealing some late sunny intervals in places, most likely and most extensively in the west. There is an outside chance of the odd shower too, although these should be fewer and lighter than of late. Becoming dry and chilly into the evening, with cloud once again encroaching from the east.

Chance of cloud free mountain/hill tops above 600m: The highest ground may just stand clear of blanket cloud down to valley floors at first. Becoming generally 60% into the afternoon with the cloud narrowly clear of the highest ground.

Visibility: Poor at first, slowly improving to very good into the afternoon. Significant deterioration again likely in encroaching low cloud during the evening in the east.

Meteorologist's View

Nothing to add.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Thu 13 May 2021	5mm	16.8mm	21.6mm

Forecast for Saturday 15 May 2021

Weather: Relatively low confidence in detail. Probably rather cloudy for much fo the day, with periods of rain spreading from the southwest. Perhaps becoming brighter later in the afternoon, although timing of improvement uncertain, giving way to a risk of slow-moving, heavy and perhaps thundery showers as well as warm sunny intervals. Hail is also possible in these heavier downpours.

Maximum wind: Southeasterly 20mph.

Chance of cloud free mountain/hill tops above 600m: 20% improving 60% late on, but note deterioration in showers and increasing risk of thunderstorms.

Visibility: Poor in early cloudy and damp conditions. Becoming very good late on, but marked deterioration in showers.

Temperature: **Valleys:** Plus 3 becoming 12 Celsius.
At 600m: Plus 6 Celsius.
Freezing level: Well above the summits.
